MARINE RAILWAY AT COLONIA. The little town of Colonia, in front of the great city of B. Ayres, has al ways been regarded as the last corner in the Oriental Republic, but is now destined to spring into great importance by the establishment of Mr. King's Marine Railway and dry-dock for repairing vessels. The commerce of the River Plate with Europe is represented by 3,000 vessels per annum and yet all this shipping is as yet destitute of the wherewith to make necessary repairs, often causing good ves-Sr. Polydoro Cesar Burlamaque has sels to be broken up as useless. FRESH MEAT FROM SOUTH AMERICA A few days ago Lord Stanley stated in the House of Commons that a report had been received from Buenos Ayres on the various methods used in the country there to preserve meat in an effectual manner for transportation to Europe. The report is dated June 26th of the present year, and Mr. Ford gives a full account of the native system of curing meat, then of Morgan's process of doing so by injecting a preparation through the circulatory system of the newly-killed animal, and next ot Liebig's process for producing the extractum carnis. Finally, he gives an interesting account of an invention for transporting meat in a perfectly wholesome condition, and as fresh as when killed, of which it appears we are likely to hear more in a few days. If the system should prove as satisfactory as it is hoped, it must effect a complete revolution in our meat supplies from abroad, abolishing the necessity for importing living animals, and so diminishing the expense of transport. The following is Mr. Ford's account of the new process called "Sloper's process:" "The remaining process to be described is one of great interest, and has been lately patented by Mrs. M.Call and Sloper. The patent has 250 per doz. been conceded for the whole of South America to Messrs. Paris and B.S. Sloper, who are at present at Buenos Ayres actively employed in making experiments, when, should they prove successful, a company will be formed in England for the working of this industry. These gentlemen profess to be able to preserve meat in its fresh and raw state, which is to arrive in England or elsewhere in the exact condition as butcher's meat just killed. and be able to dispose of it at the rate of 4d. to 5d. per lb., and that, moreover, when taken out of the air-tight tins in which it is to be packed, and on being exposed in the air, it will keep twice as long as ordinary butcher's meat. The curing process is simple, and is based on the destruction of oxygen from the vessel in which it is packed. All bone is extracted from

the meat, but the fat is left. From

the tine in which it is placed the air

-high; thistles in some parts high; the composition of which is kept a and the meat is then ready for exportation. The only risk it runs is from leakage, the smallest opening in the tin case proving destructive by allowget in. Messrs. Paris and Sloper, on 141 do Mar Chiquita 1 their arrival in April last at Buenos Ayres, gave an entertainment to the Vice-President of the Argentine Repuand other gentlemen, with a view to their tasting some samples of beef they had brought out with them from Engand, and which they had cured six months previously. The tins on being ppened were found to contain joints in 20 do first-rate condition, and on their being cooked no difference could be detected from freshly killed meat. Most sanguine hopes are formed for the success of this important discovery, and it is expected that from 10,000 to 12,000lbs. ed to England to satisfy the pro- 23 | 3p,05 moters of the projected company in Loteris de la Beneficencia de Santa Fé London that the working of the process is practicable; for although having proved successful in England, the same experiments have been thought necessary to be tried in this country, in order to judge the result on the cattle of South America, and also the effect of the heat of the voyage and crossing the line on the samples sent. Messrs. Paris and Sloper trust, on their return to London, to be allowed to give a dinner at Guildball on this River Plate Olobe.

Specie declined again to-day. The bearing going on now amongst the small brokers is some-24 80, and when called on to give the purchaser failed to give the name. The matter caused much noise, and we believe subjected the party in question to a heavy fine. The broker in question, had he waited but a few days, would probably have realized his business easily at the price stated, as the market could hardly be weaker, and if any large amount of gold is thrown on the Bolsa prices will tremble; bosides, it must be borne in mind that it is the interest of wool-buyers to drive gold down say for a few months. Paper money is every day more looked for, and even the probable new emission by order of Govern ment cannot reduce the rate of interest on paper

The Government bill authorizing the Bank t emit one hundred millions comes up before the House to-night; the impression on the Bolsa is that it will pass, but we hear the Bank Directors opposed to the measure, and stormy scenes in the Bank are anticipated.

Half the brokers of the Bolsa started for the mole head when the news of the steamer in sight transpired, but at 3 p.m. it was known that she brought no news.

A rather unpleasant story was mooted to-day about the American steamer Montauk, now the General Mitre: she began loading to-day in the inner roads, and it was discovered that she must go out to the outer roads to finish her casgo, as he draws so much water. It is said that when lving in Montevideo her water marks were painted new, and some very extraordinary mistake as to the figures is talked of. It seems she is only fitted for deep water and would do admirably to run between Montevideo and Rio Janevro.

DROPSY.

This fearful disease often makes its appearance between the ages of forty and fifty, and might generally be prevented by attending regularly to the proper action of the liver and atomach; these organs, at this time of lite, have a great tendency to derange ments, when asthma, dropsy, or disease of the heart often sets in. The blood requires frequent elimination which no other medicines can so effectually, perform as these purifying Fills, as they purge gentify, and act immediately upon the liver and stomach, and thus remove all obstructions which at the turning point of life always occur. This dangerous period should be closely watched; two doses a week of about six Fillswill ward off all dangerous diseases. But in all cases or dropsy the Ointment is a wonderful and sovereign remedy and must be effectually rubbed twice a day into the suffering parts.
