Having received several very important improvements viz.:—

Morrison's wonderful little Engine, for cleaning and excavating idecayed teeth, preparatory to filling, which does the work with such rapidity and beautiful exactness, that in a very few seconds an otherwise sensitive tooth is preparatory for the Gold in a manner unattrinable by the disarceable method of scraping and burning, so well known by those who have experienced the operation.

Also Green's Electric Engine, which took the grand Diploma of Honor at the Vienna Exhibition. The feat of harnessing lightning is fairly done in this neat, efficient, and truly wonderful little mechine. By this we manipulate the gold into the most difficult or frail tooth, with the most exquisite exactness, and without danger of fracturing the most delicate cnamel, Then, with the same engine, we finish and polish the filling in less than one quarter the time formerly required, and without paratical who has had tooth filled in this manner

We have also received an immense quantity of the most beautifully carved Artificial Teeth comprising thousands of different shades and forms, from which with our long practical ex prience we can match any style or feature, complexion, or expression, with such artistic incones that detection is impossible.

The Plate we use for the atmospheric pres-sure is the Whalebone Rubber, the lightest and strongest known.

On one point parents are perhaps entitled to a pledge:

The custom of over-crowding, so prevalent and so justly complained of, shall at all hazards be avoided, and only a limited number of pupils received. This will necessitate a trifling increasant the scale of fees; but the Director feels confident that the extra expense will be more than repaid by the additional care he will thus be enabled to bestow on the pupils confided to his charge.
