Dental Institute. Superintended by CHARLES E. KRAUSE. SURGEON DENTIST.

104-CALLE SUTPACHA-104 ALTO S.

(Between Piedad and Rivadavia.)

I have recently returned from New York, having travelled extensively in Europe and the United States, examining the latest and most improved methods for such as fitting and operating in Surgical and Mechanical Dentistry, in addition to which I have engaged the services of two learned and skilful Dentists from New York, with whose able assistance, and my own experience of 30 years' practice, I now offer to the Public of Buenos Ayres.

Partial Sets of Teeth, from one Tooth to a full S.T., of the latest and best material, satisfactorily executed and made to fit. My Patients are aware of my ability to extract teeth quickly, and with but little pain, but to timid persons, who desire an Anæsthetic, I keep on hand, and administer fresh daily, the Nitrous Oxide (Protoxide of Nitrogen, or Laughing Gas), for the painless extraction of Teeth.

Dentifics and Tinctures for Preserving and Cleansing the Teeth; also a fine assortment of Tooth-brushes. To be had at any time. For the accommodation of Dentists, I have opened a Dental Depot, where all necessary materials can be procured.

New Patent R.R. Grease

YELLOW GREASE Manufactured and Patented by RICHARD GAMBLE.

Suitable only for this Climate and Not for Europe.

It is manufactured to suit Summer, Winter and Spring, and is only used for Railways, Tramsways and Carts, Bullock Waggon, &c. It consists of Nine different fluid oils and so-called by a chemical process. It will resist the hottest sun, and will not get into a liquid or fluid state. It is only when the action of the axle commences it becomes a rich creamy fluid, and when the action stops it again solidifies.

It is of a suitable consistency, of good lasting power, attended with but little increase of temperature even at the highest speeds, and leaves not the smallest residue in the axle boxes. A grease which is too firm will remain comparatively solid in the box, and allow the axle to become hot, whilst on the other hand one that is too thin, becomes exhausted by a few miles running.

This Grease is of more importance than at first sight appears; for will the great amount of railway companies forms no inconsiderable item of expenditure, the waste of motive power and wear and tear of plants, entailed by the use of unsuitable grease is enormous.

The merits of the Grease, in its general utility as a LUBRICANT, and also for its CHEAPNESS, are shown when compared with other kinds hitherto used, that are entirely useless for any purpose but that of lubrication.
